

USE CASE 3

AI for Frontend Generation & UI Risk Control

Covers:

- AI for Frontend
 - Accessibility checks
 - UI pitfalls
 - State bugs
 - Regression risk
-

Scenario:

Build:

- Product listing page
- Cart page
- Checkout form

AI generates UI components.

The AI Must:

- Add ARIA labels
 - Avoid state mutation bugs
 - Warn about race conditions
 - Avoid hallucinated APIs
 - Suggest regression test points
-

Example Prompt:

"Generate a React product listing component.

Requirements:

- Accessible (WCAG 2.1 AA)

- Handles loading and error states
 - Avoid direct state mutation
 - Use API endpoint: /api/v1/products
 - Provide explanation of potential UI risks."
-

What to Build:

- React/Angular component
 - Accessibility audit
 - State management improvement
 - Regression checklist
-

Deliverables:

- UI code
- Accessibility compliance proof
- UI risk report
- Prompt library entry
